GLOSSARY

Advanced NLP with Python for Machine Learning

With Derek Jedamski

Term	Definition
Anaconda	A highly efficient tool to access documentation
NLP	Natural language processing; the study of linguistics, computer science, and artificial intelligence, and their interactions with computers and human language
RNN	Recurrent neural network; a method that uses the output of one function as the input of another
shallow, fully connected, feed-forward neural network	A neural network type that contains the three layers: inputs, hidden, and outputs
tokenization	The splitting of a string or sentence into a list of words for further evaluation
vectorized text	Converting text into numerical values to compute it
`word2vec`	A powerful tool to help in analysis
